NEW HEALTH CARE RESOURCE FOR THE UNINSURED

Website created to connect physicians and other health care providers with the 47 million Americans with no health insurance or who have high deductible insurance plans.

Austin, Texas - PATIENT DEALS, LLC is targeting America's 47 million uninsured adults and children who pay cash for health care, as well as the estimated 16 million Americans with high deductible/catastrophic insurance plans. By utilizing PATIENT DEALS, health care providers will be able to fill vacant appointment spaces with cash paying patients while offering these patients discounts to reflect the cost savings from billing and collection services. "PATIENT DEALS will provide multiple choices for quality healthcare for our uninsured Americans" says Scott Vanlandingham, co-founder of PATIENT DEALS. "Our services will nurture a competitive landscape benefiting both patients and participating doctors."

The U.S. Census Bureau defines "no health insurance" as a person lacking any type of health insurance -- including a health insurance plan through a job or union, or coverage through Medicare, Medicaid, the Military, or state government programs-- for the entire year. 80% come from working families. 20% are children. The percentage of Americans who are uninsured rose largely because the percentage of people with employer-sponsored coverage continued to decline, as it has in the past several years. "Our goal is to establish a community network that becomes more accessible to the immediate medical needs of the uninsured" says Daniel Hummel, co-founder of PATIENT DEALS.

PATIENT DEALS initiative is to create a consumer driven market, in health care, which will help many uninsured Americans get the necessary medical services they need.
